

B1  
means, responsive to a change in data associated with an identified individual, for propagating said change to ones of said plurality of subscriber address books which contain an entry corresponding to said identified individual.

B2  
8. A method of operating a data management system for automatically maintaining address information in a plurality of subscriber address books, comprising the steps of:

storing a plurality of subscriber address books, each said address book comprising a plurality of entries, each entry corresponding to a named individual and including at least address data for said named individuals; and

propagating, in response to a change in data associated with an identified individual, said change to ones of said plurality of subscriber address books which contain an entry corresponding to said identified individual.

B3  
15. A data management system for automatically maintaining user data among a plurality of communities, each of which contains a plurality of members, comprising:

means for storing community membership data for a plurality of communities, each said community comprising a plurality of entries, each entry corresponding to a named individual who is a member of said community and including a set of individual data for each of said individuals;

means for providing a user with access to a set of said individual data of an identified individual who is a member of a same community as said user; and

means, responsive to a change in individual data associated with said identified individual, for propagating said change to all of said plurality of communities in which said individual is a member.

B4  
24. A method of operating a data management system for automatically maintaining user data among a plurality of communities, each of which contains a plurality of members, comprising the steps of:

B4 storing community membership data for a plurality of communities, each said community comprising a plurality of entries, each entry corresponding to a named individual who is a member of said community and including a set of individual data for each of said individuals;

providing a user with access to a set of said individual data of an identified individual who is a member of a same community as said user; and

propagating, in response to a change in individual data associated with said identified individual, said change to all of said plurality of communities in which said individual is a member.
